

Portfolio & Performance Summary

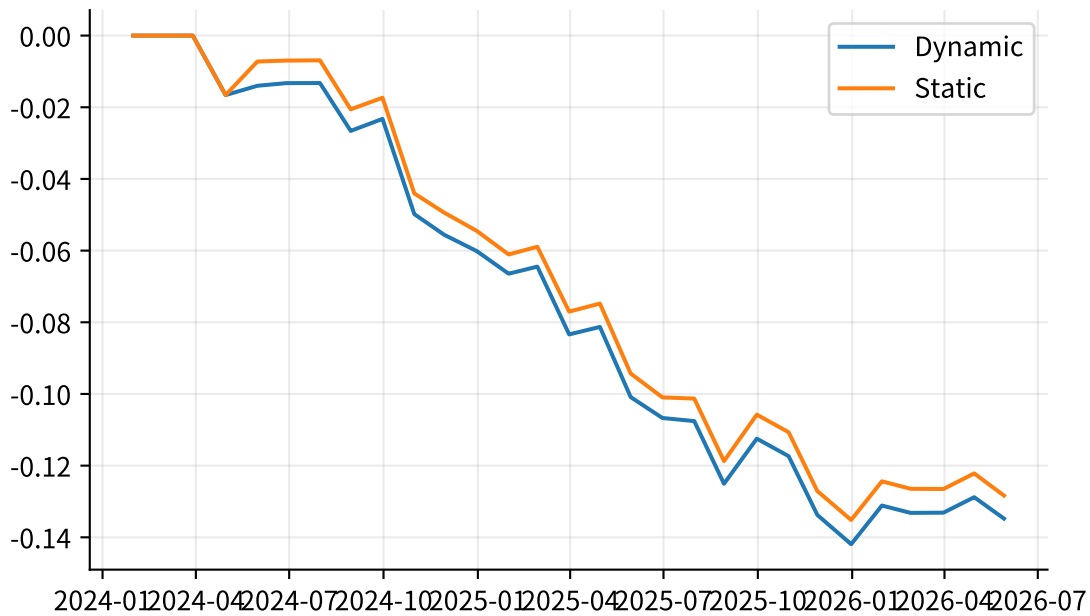

Latest portfolio weights (2026-05-29)

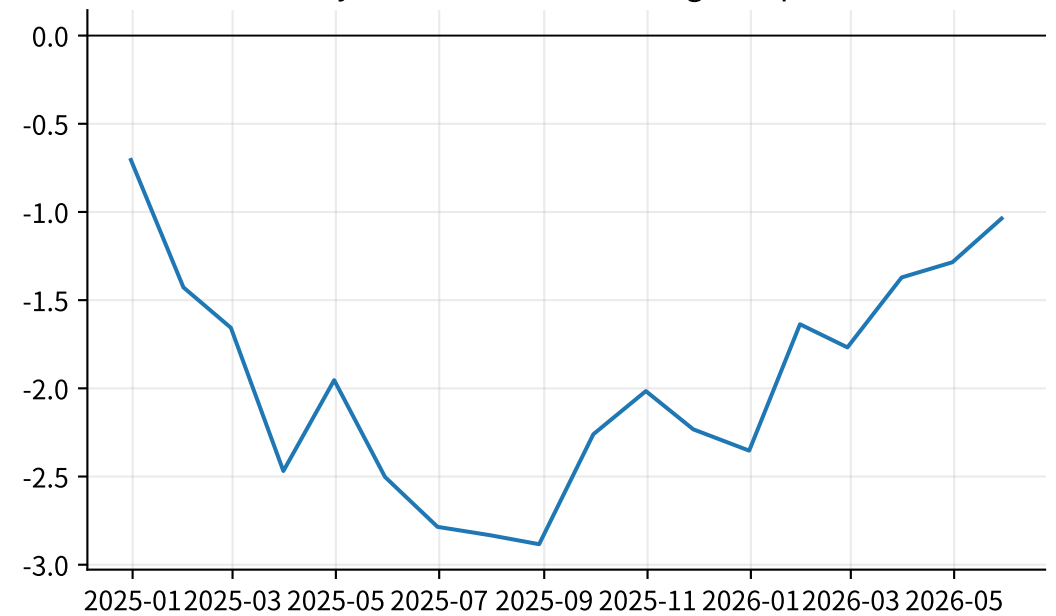

Cumulative performance

Drawdown

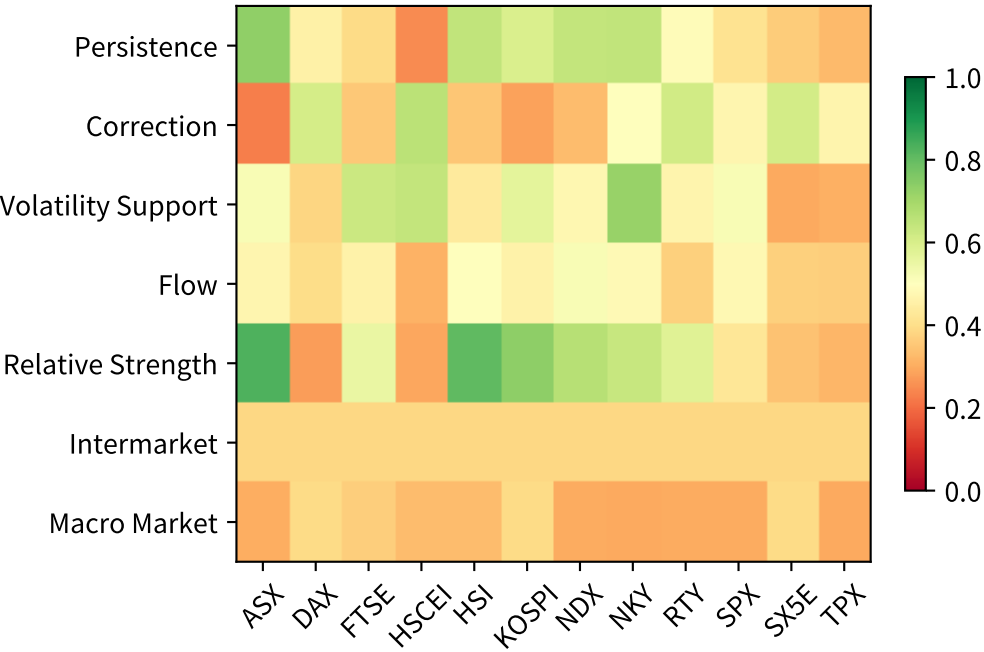

Dynamic 12-month rolling Sharpe

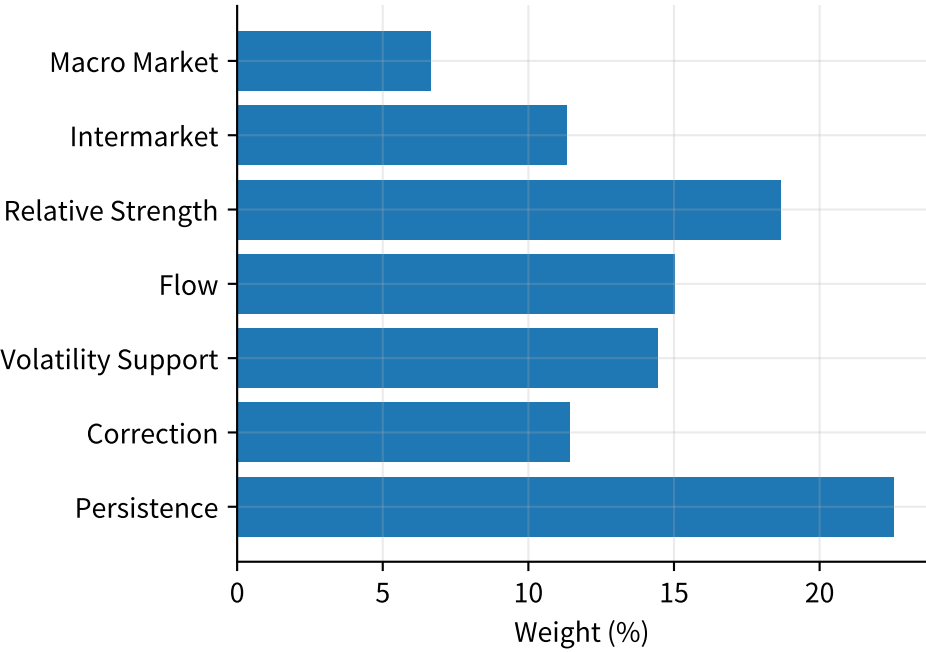

Evidence State & Attribution

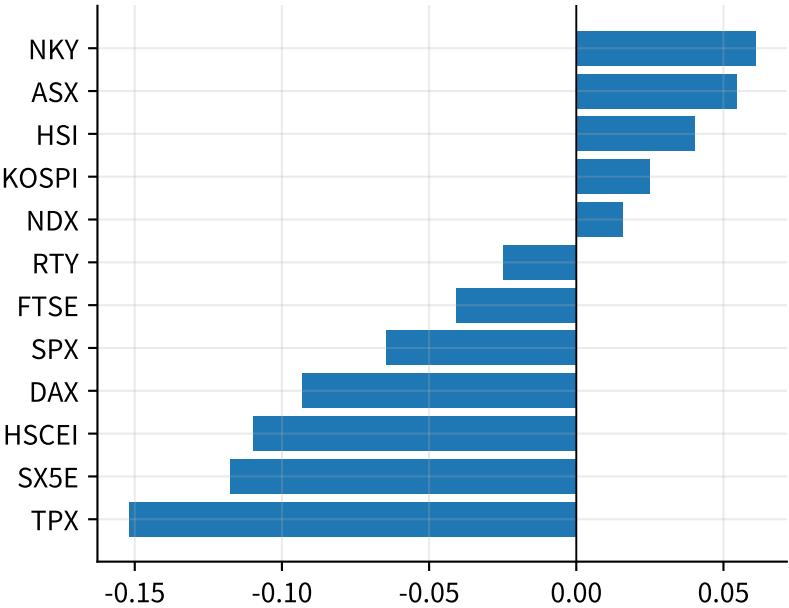

Latest evidence heatmap

Latest evidence weights

Evidence-only composite score

How to read

0 = bearish, 0.5 = neutral, 1 = bullish

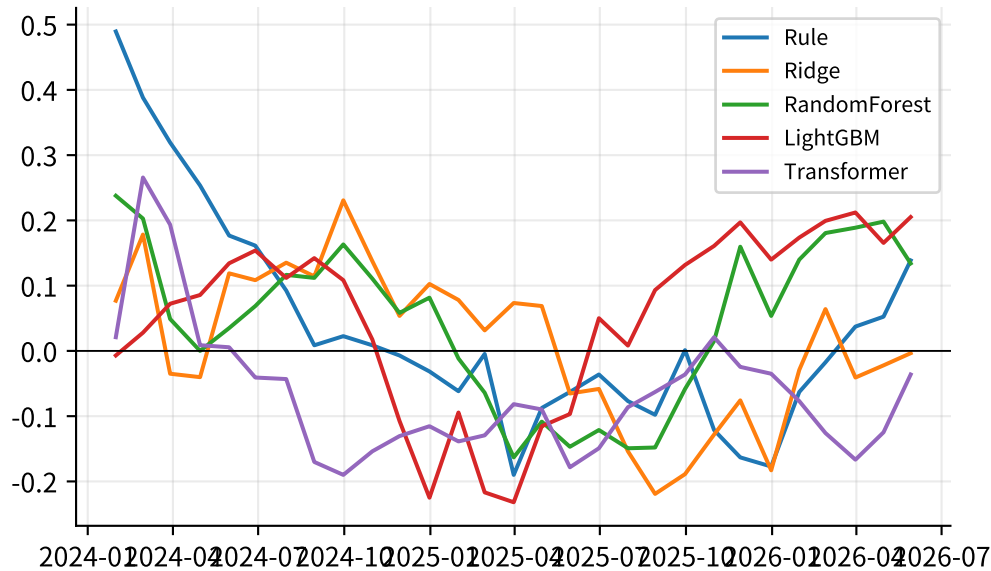

Evidence scores translate raw features into PM-readable market states.

Weights combine economic prior and trailing OOS reliability.

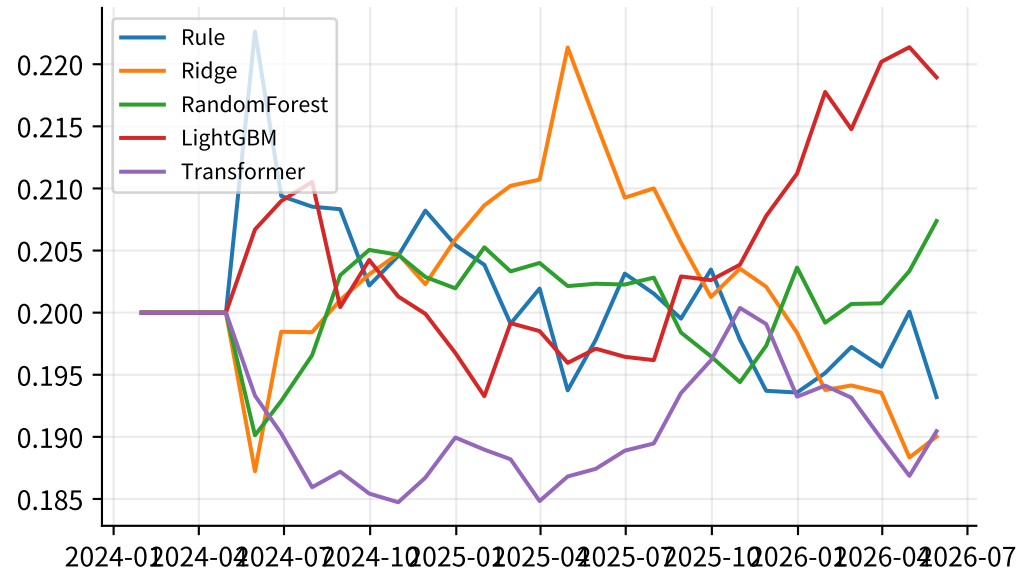

The final portfolio also reflects model ensemble and risk controls.

Model Ensemble - Dynamic Voting Power

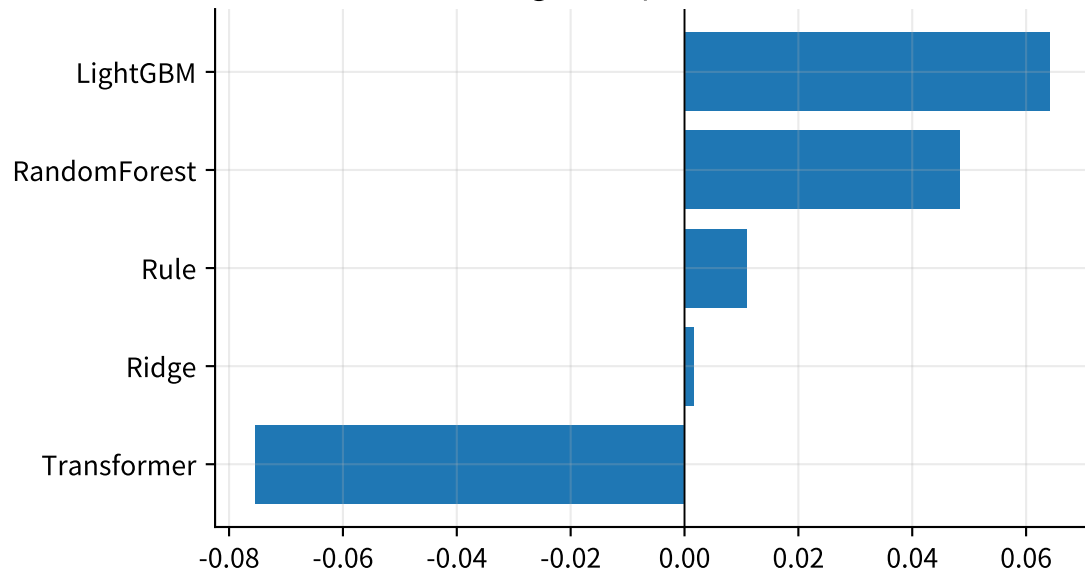

6-month average Rank IC

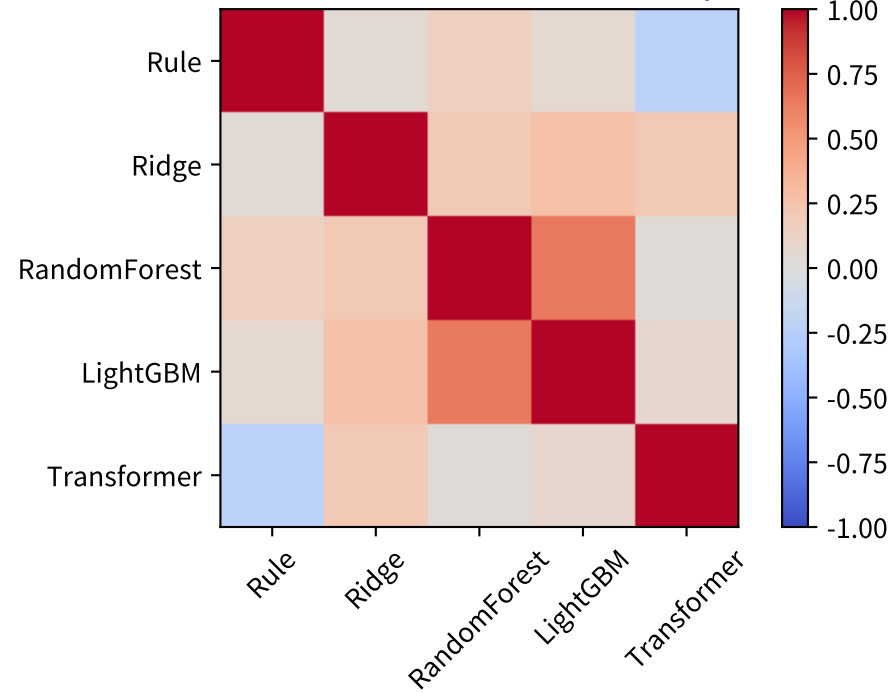

Dynamic model weight history

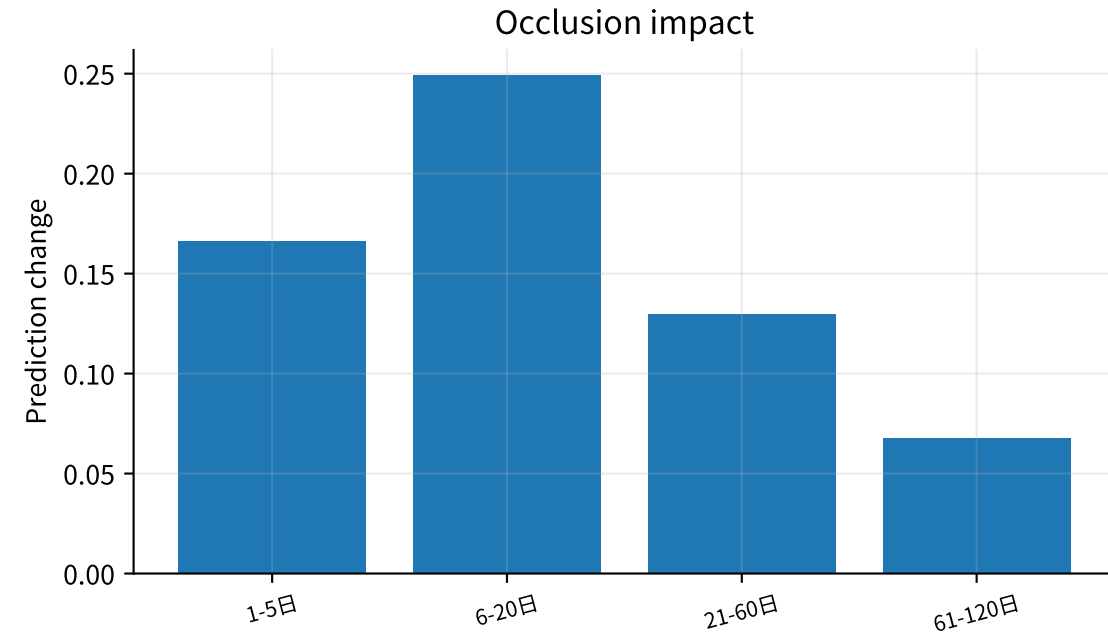

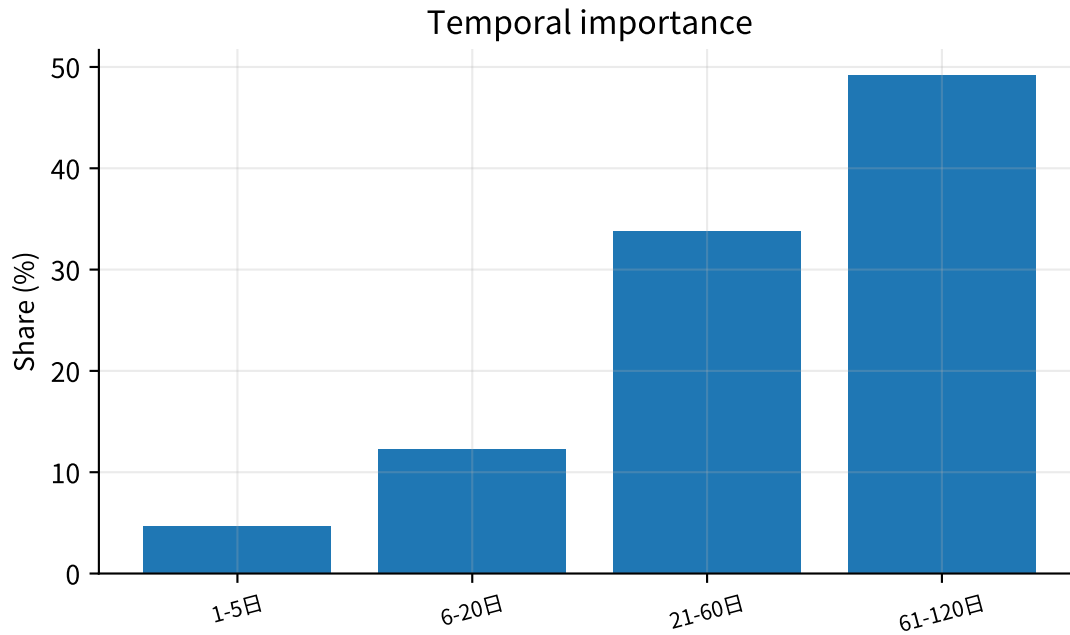

Average test-period Rank IC

Prediction correlation / diversity

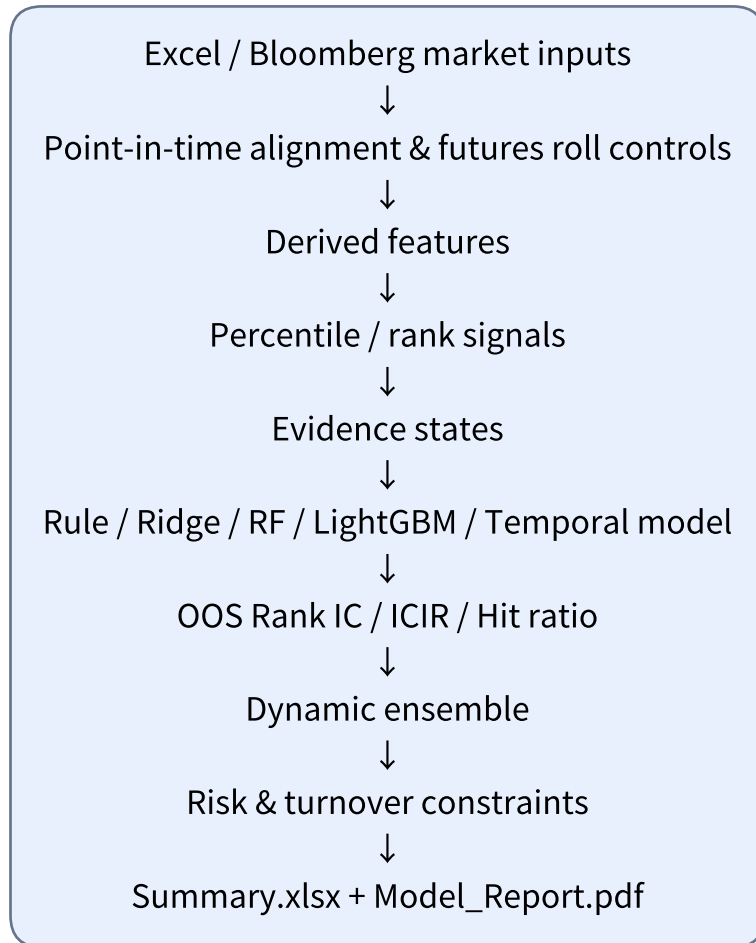

Transformer Explanation = Time Band x Evidence State

Time band	Importance	Momentum	Trend structure	Volatility
1-5日	5%	Bullish	Bullish	Calm
6-20日	12%	Bullish	Strong	Neutral
21-60日	34%	Strong	Strong	Neutral
61-120日	49%	Bullish	Bullish	Neutral
121-252日	0%	Bullish	Bullish	Neutral

Example: NKY. The model focused most on 61-120日. In that band, Momentum=Bullish, Trend=Bullish, Volatility=Neutral. Attention is not treated as causal; occlusion impact is shown above as a robustness check.

Implementation Flow & Data Requirements

Required core fields

- date, asset_id
- PX_OPEN, PX_HIGH, PX_LOW, PX_LAST
- VIX, DXY, US 2Y, US 10Y

Optional / confidence-adjusted

- PX_VOLUME, OPEN_INT
- MOVE, HY spread
- Oil, copper, gold
- Local FX pairs

Controls

- one-business-day lag for cross assets
- adjusted continuous futures prices
- roll-window penalties for volume/OI
- monthly non-overlapping evaluation
